

K2 Escape

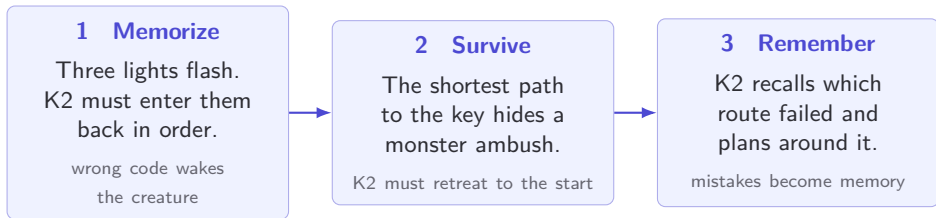

A Multi-Agent Survival Challenge

Winnie Hsu · Blythe · Kate · Wei Min

University of Michigan · K2 Horizon Hackathon

Game Design: Can K2 Escape the Backrooms by Itself?

No human player — K2 Horizon controls the character from start to exit, in 180 seconds.

Core idea

K2 decides **what to do**. The game engine decides **how to execute it**.

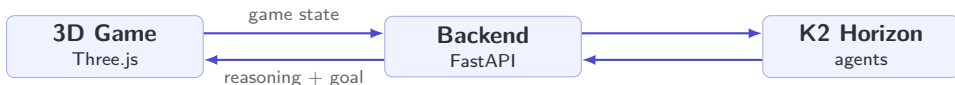

Frontend: A Live 3D Backrooms

First-person 3D world

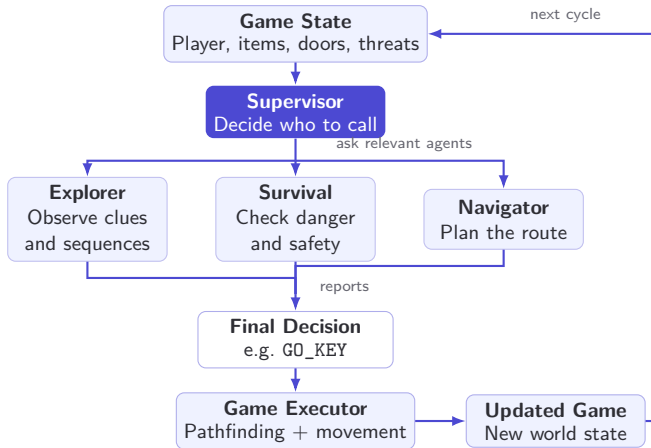

- ▶ Flashlight POV in Backrooms halls
- ▶ A red-eyed creature on the chase
- ▶ **CORRECT** / **FAIL** pop-ups

Watch the agents think

- ▶ Agents light up when called
- ▶ Live reasoning trace
- ▶ Live map with blocked routes

Multi-Agent Architecture

Specialists advise. The Supervisor decides. The game acts.
